

GIDEON 1000 LIBRARY RESEARCHER

35mm microfilm is used essentially for storage of larger texts, documents and sketches such as newspapers, journals, and engineering drawings. To read the material which has been stored on microfilm, whether last year's journal or the newspaper from World War II, you need a reliable reader.

MICROVUE PRODUCTS offers two models of 35mm microfilm readers.

An ideal solution for libraries and research centers,

- Ergonomically designed for comfortable,
- continuous viewing of 16/35mm microfilm reading,
- Generous 585 X 540 (WxH)(mm) screen for full-size images,
- Zoom lens (9X to 21X) with precision focusing and sharp images,
- 360 degree image rotation. Motorized film movement with bi-directional variable speed with adjustable slow speed control,
- Motorized vertical scanning for viewing of image from top to bottom.
