

## Proserv PS2002

Preservation of archivals by microfilming, the microfilm is the technically easy and economical solution for backing up by filming.

At present there is no digital storage that is able to achieve even nearly such a long durability.

### The new camera head

- The variable frame patch provides highest possible economical efficiency of the film.
- By projecting the field size, the positioning of the masters is easy, quick and safe. In combination with the variable frame patch an optimal efficiency is secured.
- Electronic marking by 3-step-blip appliance guarantees quick finding of stored information or the possibility of automatic further processing.
- Frame patch and mask can be variably adjusted.
- All essential functions of the camera head are indicated on the display.
- Book holder and special book support guarantee highest-possible careful treatment of masters up to A0 on 16 mm and 35 mm rollfilm.
